

CivicSense

Automated Community Complaint Classification & Routing.

Team Name: InnoTech

Team Members: Basharath S

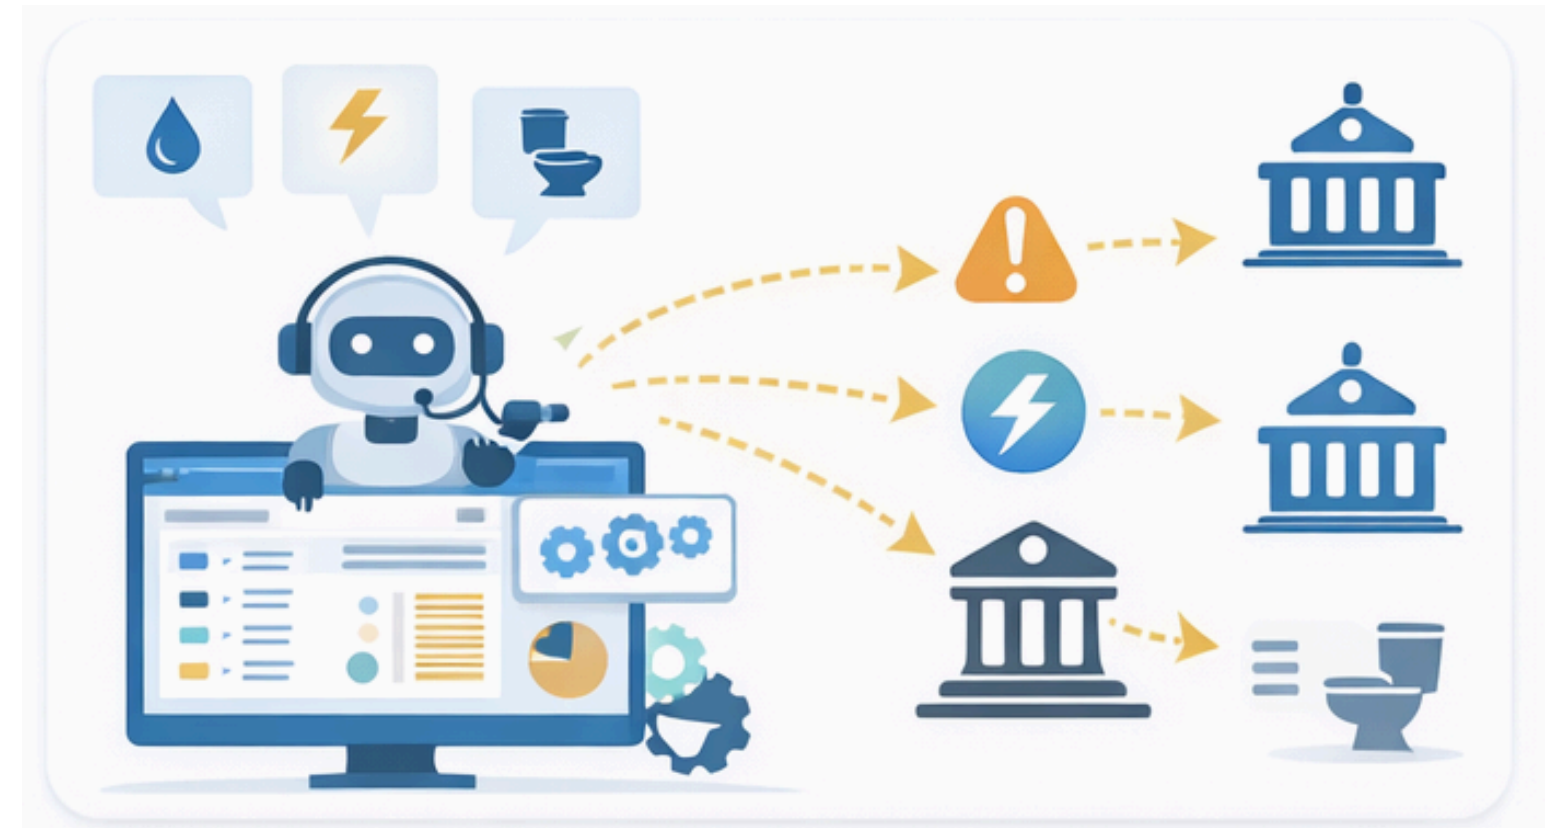

Current community grievance systems in many municipalities are plagued by manual processes. Citizens often face:

- **Manual & Slow Triage:** Complaints regarding water, electricity, or sanitation are manually sorted by staff, leading to significant delays.
- **Routing Errors:** Issues are frequently sent to the wrong department, causing "bureaucratic ping-pong".
- **Lack of Prioritization:** Life-threatening issues (like sparking wires) are buried under minor requests because systems lacks real-time urgency detection.
- **Transparency Gaps:** Citizens are often left in the dark about the status of their grievances.

CivicSense is an AI-powered orchestration platform that automates the entire lifecycle of a civic complaint.

- **AI Classification:** Uses Large Language Models (LLMs) to understand natural language and instantly categorize issues.
- **Urgency-Based Scoring:** Automatically calculates a priority score based on intent and risk types.
- **Automated Routing:** Connects directly to department-specific dashboards, bypassing manual gatekeepers.
- **Direct Notification:** Closes the loop by notifying citizens of progress via widely-used platforms like WhatsApp.

FEATURES

Intelligent Triage

Automatically maps complaints to departments like Water, Garbage, Electricity, or Health.

Urgency Prediction & Escalation

Flags critical safety hazards for immediate dispatch and escalates unresolved high-priority tickets.

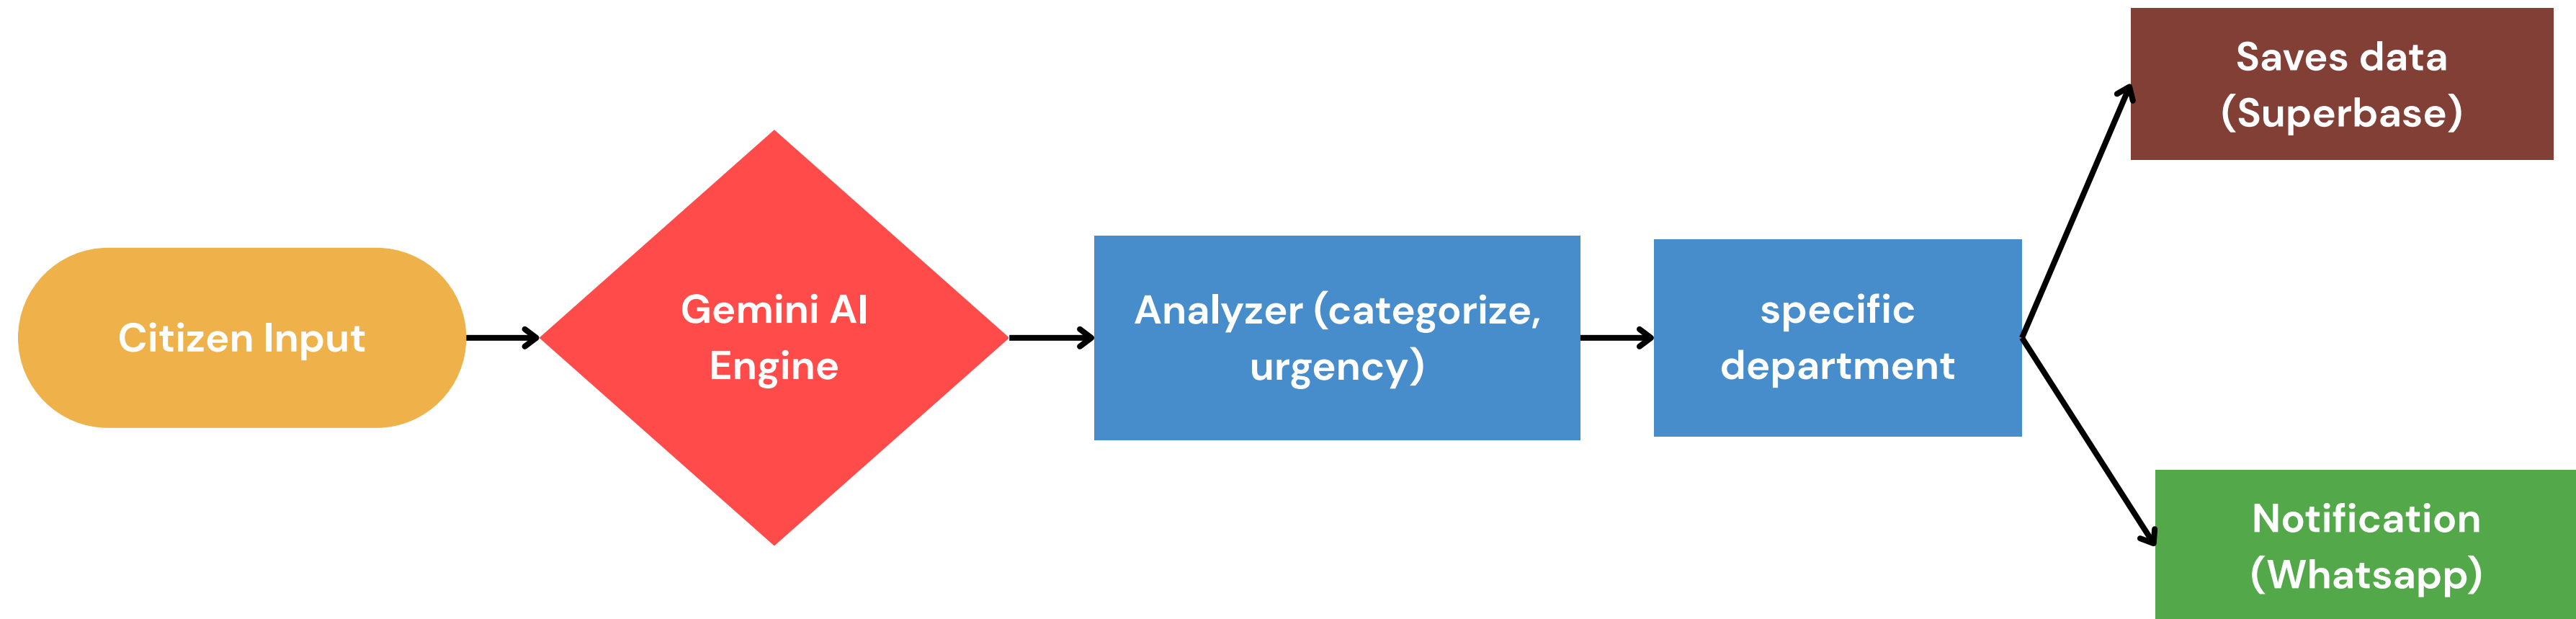

Authority Dashboards

Role-based views for officials to manage and update ticket statuses.

Transparency Metrics

Real-time Notification based on the Authority updated status

FLOWCHART

B2G (Business to Government)

Licensing the software to Municipal Corporations on a subscription basis for urban management.

Operational Efficiency

Reduces government overhead by cutting resolution times from 30 days to under 48 hours for critical issues.

TECH STACK

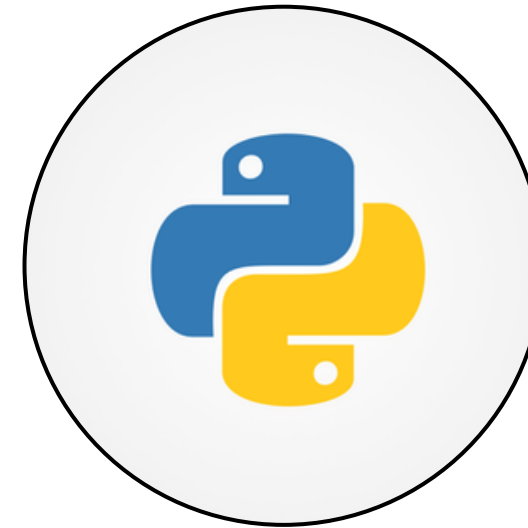

Streamlit

Fast, interactive
web UI for
citizens/admins

Gemini AI

Google Gemini
(LLM) for
intent extraction.

Python

Logic
Orchestration and
data processing

Superbase

For structured
cloud storage

Sustainable Cities & Communities

- Making cities inclusive, safe, and resilient through efficient urban management.

Clean Water and Sanitation

- Ensuring faster resolution of leaks and waste management issues.
